Sentry Metered CDU

C-24V

Mid-Density Metered Power Distribution

Increasing power demands and density in the equipment cabinet requires new functionality from your cabinet PDU. The Sentry CDU product family uniquely meets these demands.

The Sentry Cabinet Power Distribution Unit (CDU) is an intelligent PDU with local LED input current monitoring, allowing network engineers to utilize the CDU’s True RMS Power Monitor to precisely measure the current (in amps) that network devices are drawing on the power circuit. As new servers and devices are added to the power drop, immediately observe its impact on the cumulative current draw. This allows the engineer to safely load each circuit to its maximum allowable load capacity without the danger of overloading the power circuit.

Input Current Monitoring

The CDU’s exclusive True RMS current monitoring is critical to preventing overloads in high-density computing environments. LED digital displays on the CDU enclosure report the input current of each phase or branch circuit.

Branch Circuit Protection

The Sentry CDU Family meets the new UL 60950-1 requirement for branch circuit protection.

Attention! The Sentry CDU products meet the above criteria by providing overcurrent protection with UL-listed Bussman SC fuses for each branch circuit.

Button Mounting

All CDUs are also compatible with button & “keyhole” style mounting for cabinets. Several cabinet manufacturers are now using this method for installing power distribution units in the cabinet.

Key Features

- Input Current Monitor:
  Precisely measure the aggregate current draw (in amps) on each power circuit. On-site verification of the input current with the LED digital display.

- Power Distribution: 120V, 208V, 230V

- Mid-Density: Single power input feed; 24 outlets per enclosure.

Additional Benefits:

- Branch Circuit Protection
- Input Current Monitoring
- Button Mounting
### Sentry CDU Technical Specifications

#### Branch Circuit Protection

The Sentry CDU Family meets the new UL 60950-1 requirement for branch circuit protection.

**Attention!**

The Sentry CDU products meet the above criteria by providing overcurrent protection with UL-listed Bussman SC fuses for each branch circuit.

#### C-24V

**Mid-Density Metered Power Distribution**

Increasing power demands and density in the equipment cabinet requires new functionality from your cabinet PDU. The Sentry CDU product family uniquely meets these demands.

The Sentry Cabinet Power Distribution Unit (CDU) is an intelligent PDU with local LED input current monitoring, allowing network engineers to utilize the CDU’s True RMS Power Monitor to precisely measure the current (in amps) that network devices are drawing on the power circuit. As new servers and devices are added to the power drop, immediately observe its impact on the cumulative current draw. This allows the engineer to safely load each circuit to its maximum allowable load capacity without the danger of overloading the power circuit.

**Input Current Monitor:**

- Precisely measure the aggregate current draw (in amps) on each power circuit.
- On-site verification of the input current with the LED digital display.

**Additional Benefits:**

- **Agency Approvals**
  - US & Canada (cTUVus mark) to UL 60950-1:2003 and CAN/CSA 22.2 No. 60950-1-03
  - European Union (TUVGS mark) to EN 60950-1:2001
  - FCC Class A, Part 15
  - CE
  - EMC - EN 55022 Class A, EN 55024, CISPR 22 Class A

**Branch Circuit Protection**

- Compliant to UL 60950-1

#### Key Features
